AI on IBM Z and LinuxONE

Discovery workshop overview

aionz@us.ibm.com

AI on IBM Z and LinuxONE | Business Value Discovery Workshop

Making transaction processing smarter and more valuable

By applying AI decisioning directly within your high-volume, transactional workloads and applications already running your business, this **free-of-charge**, 1-2 day workshop will identify and demonstrate high-value that matters to your business: revenue growth, operating margin, customer experience, risk reduction, and more.

Working with IBM experts, selected opportunities are rapidly validated without disrupting operations through a focused Proof of Concept, demonstrating measurable improvements in decision velocity, consistency, and business outcomes on your core transactional systems, IBM Z and LinuxONE™.

Contact us at aionz@us.ibm.com

Required Client Personas for Workshop

- Line of Business and/or Business Analyst
- Chief Data Officer
- AI Leader | Data Scientist
- Application Architect
- Infrastructure Architect

Identify & Assess Business Value

Pinpoint high-impact AI opportunities within your high throughput transaction flows to drive growth, reduce risk, and unlock deeper operational and market insights from your core systems.

Observe Transactional AI in Action

Witness intelligence elevate AI infusion transforms routine business decisions into valuable insights that unlock competitive differentiation and untapped business potential.

Design Your Proof of Concept

Co-create your Transactional AI proof of concept with IBM and your key leaders to move beyond ideas, proving value early and creating momentum toward confidently deploying intelligence into everyday business execution.

Preparing for the Workshop

Who Should Attend and Why

Bringing together business, tech, and data leaders to shape what's possible.

To get the most out of this session, we recommend a small, focused team representing business, application owners, data, and infrastructure. Each role brings critical input to assess value and feasibility.

Role	Key Contribution
Executive Sponsor (e.g., Head of Business Unit, COO)	Sets vision, priorities, and business alignment
Business Owner	Defines pain points, goals, and success factors
Business Analyst	Walks through business flows, decisions, and business metrics
Application Owner	Explains how decisions are implemented today
Data Owner	Shares data availability, structure, and labeling knowledge
Infra / Platform Owner	Describe systems architecture and deployment context
AI Lead or Data Scientist	Advise on modeling, scoring, and AI readiness

We generally recommend that the executive sponsor open the workshop and rejoin for the final readout. They do not need to participate throughout unless they choose to.

What to Expect from This Workshop

A focused, collaborative session to identify where AI on IBM Z & LinuxONE delivers the greatest impact.

AI on Z and LinuxONE Discovery Workshop

This is a business-informed, technically-grounded workshop that pinpoints where AI — deployed on IBM Z & LinuxONE — can enhance decisions and outcomes across your enterprise.

We will guide you through:

1. **Selecting 2–3 high-impact use cases (if known)** — where AI-driven decisions can meaningfully improve performance or reduce risk.
2. **Mapping the decisions** — that most influence cost, effort, and outcomes.
3. **Assessing feasibility** — across decision logic and data readiness, including proximity to systems and AI deployment options.
4. **Exploring enabling technology patterns** — how models can be integrated directly on IBM Z & LinuxONE, leveraging on-chip AI acceleration with Telum and the newly announced Spyre cards for real-time insight at scale.
5. **Quantifying potential business value** — using metrics such as volume, latency, exposure, and uplift.

Defining next steps — toward a targeted AI pilot that demonstrates both business and platform outcomes.

This is about where AI will make a difference — in your decisions, your systems, and your business — right on the platform where your most critical workloads already run best.

What to Expect from This Workshop

Selecting the right approach depending on where you are today

We tailor the approach to your situation, select the most suitable methods, and collaborate with you to identify and implement the most impactful use case for your business

- If you have no use case idea..
 - We drive Enterprise Design Thinking methods to identify, prioritize, and explore a feasible use case that is intended to deliver meaningful business value
- If you already have identified a use case idea or AI insertion points
 - We drive use case deep-dive exploration and offer a Business impact assessment
- If you have a business use case idea. but would like to explore more
 - A Hybrid approach works best

Elements in a Workshop Agenda

Choose from selection of workshop topics to create the ideal workshop for the client

Workshop Element	Description
AI Fundamentals	Overview of the modern AI landscape, capabilities, and trends shaping today’s intelligent systems. It also defines commonly used AI terminology to build a shared foundational understanding for all participants. (~45 mins)
AI on IBM Z Strategy and Technology Overview	Comprehensive insights into AI on IBM Z, covering architectural aspects of AI ecosystem -- including integration with open-source technologies and <u>highlighting common industry use case patterns in relevant industry</u> (~60 to 90 mins)
Technology Patterns and Entry Points	Common implementation patterns; reference architectures (~30 mins)
Use case (decision point) exploration & business value assessment	Explore key business use cases (decision points) and identify key value drivers with quantifiable impact of AI infusion and ROI. Could include Enterprise Design Thinking (EDT) to create list of possible use cases and to prioritize them. (~1 to 3 hrs).
Use case(s) deep dive	Comprehensive review of the current processing workflow to identify inefficiencies and key areas for AI infusion. Align technical solutions with business priorities to maximize ROI (~1 to 4 hrs)
Visualize Use case with AI infusion	Co-create the to-be process leveraging AI capabilities, including possible reference architecture (~15 to 30 mins)
Technology Overview(s)	For clients that already have a product and want to use it; Also, could be at the direct request of a client to explain a product they have heard of; Or could be a follow-on to the “Visualize Use case with AI infusion” workshop element to explain in detail the reference architecture proposed (~30 to 60 mins)
Technology Demo(s)	Great as a follow-on to “Visualize Use case with AI infusion” and/or “Technology Overview” (~15 to 30 mins)

Sample 1-day Workshop Agenda

A structured, customizable working session — uncovering and prioritizing high-impact AI opportunities.

AI on Z and LinuxONE Discovery Workshop

Day 1

Time	Topic	Duration	Who
09:00 – 09:20	Welcome & Introductions	20 mins	All
09:20 – 10:05	Client Overview including AI Ambitions	45 mins	Client
10:05 – 10:45	AI Fundamentals 101 (Optional)	40 mins	IBM
10:45 – 11:00	Break	15 mins	All
11:00 – 12:00	AI on IBM Z & LinuxONE Strategic and Technology Overview	60 mins	IBM
12:00 – 13:00	Lunch	60 mins	All
13:00 – 14:00	Use case Exploration & Business Value Assessment	60 mins	All
14:00 – 14:15	Break	15 mins	All
14:15 – 15:15	Use case Deep-Dive	60 mins	All
15:15 – 15:45	Visualize Use Case with AI Infusion	30 mins	IBM
15:45 – 16:00	Wrap-Up & Next Steps	30 mins	IBM

The agenda is intended as a guide and can be adjusted based on your team’s focus areas and input.

How to Prepare and What to Bring I

This is a working session — please come prepared with real use cases related to real decisions and real data.

If you have use case ideas already in mind, we recommend preparing the following for each:

- 1. **Process Flow Overview**
 - A simple diagram or slide with clearly marked decision points.
- 2. **Decision-Level Metrics**
 - Transaction volume.
 - Associated revenue or cost.
 - % manual review.
 - Error, fraud, or exception rates.
 - Cycle times, rework, or satisfaction KPIs.
- 3. **Known Pain Points**
 - Bottlenecks, delays, inconsistent decisions, or sources of risk.
- 4. **AI Ambition**
 - Clear goals (e.g., reduce manual effort, improve accuracy, catch fraud earlier, ..).
- 5. **Data Readiness**
 - Historical data availability and location.
 - Whether outcomes are labeled (e.g., approve/reject, fraud/clean).
 - Any quality gaps or concerns.

How to Prepare and What to Bring II

This is a working session — please come prepared to share your thoughts even if you don't have a use case idea in mind

If you don't have a use case in mind, we recommend thinking of following points:

1. How are decisions made today?

- Where are business rules used today to make decisions?
- What are the areas where a faster and automated decision would bring business value?

2. New opportunities

- What are the new opportunities in your workloads? (e.g., loss prevention, improved customer experience, catch fraud earlier, reduce manual effort, improve accuracy, etc.)
- Which value would the co-location of AI processing with your data and transactional application bring to your business?

3. Existing AI implementation

- Is AI being used off platform leveraging IBM Z data?
- Is any z/OS app sending in-transaction scoring requests off platform?
- What AI use cases have you implemented (on any platform)?
- What is the relevance of IBM Z data in these use cases?
- What are the business drivers for AI in your applications?

After the workshop

Client Discovery Workshop Follow-up

Helping our customers get to production

- Deliver a **detailed report** on everything that happened during the workshop
 - Incorporate details of the current environments and their “as-is” of the selected use case and how running the workload on Z will benefit the business
 - Include tangible business value with specific metrics with AI on Z infusion in report
 - This will provide support, so the client can get executive buy-in and approval for resources for the POC.
- Schedule playback of report to walkthrough to:
 - Ensure accuracy
 - Suggest next steps of sponsorship for a PoC
 - Schedule subsequent meetings to start the scoping of the PoC
 - Leverage IBM Client Engineering and/ or ww System Center teams
 - Assist in every step of the way collaborating with the client until the POC is completed
